Projects

A/B Testing

- Have participated in the creation of a platform that allows product owners to validate their idea through A/B Testing.
- Integrated existing analytic tools.

BNPL Front-Office

- While being involved in the BNPL project worked with advanced web development technologies like React JS, MongoDB, and TypeScript.
- Closely worked with business system analysts to understand the requirements to insure that the right set of UI modules had been built.
- Writing UI/API automation tests via Cypress.

Personal Web pages

Have been working on self-created projects which involved user-friendly, easy-to-use landing pages and other projects with different methods and features.
